about us

Stanpumps Engineering Industries is headquartered in Hyderabad, India and is part of the Standard Group of Companies serving both domestic and international markets.

We aim to be your most valued and value-adding supply partner providing innovative pump solutions which enhance operational activities, save money and/or improve plant and operator safety.

As an authorised distributor of many leading technologies including dry vacuum, rotary lobe and roots booster pumps, we provide value adding services through standardised and client specific turnkey automated equipment solutions. Such solutions aim to enhance the operations of process equipment such as vacuum distillation, solvent recovery, reactors, filter dryers, gas dispersion and hydrogenators.

our services

We aim to deliver the best service in the industry and have a network of service centres across India as well as in the UK.

With headquarters in Hyderabad, Stanpumps is ideally positioned to serve the growing chemical and pharmaceutical markets of Southern India.

The company also has satellite sales and service centres in Mumbai, Vizag, Chennai, Bangalore, Delhi, Kolkata, Pune and Ahmedabad together with a UK office in Sheffield for the management of export orders.

our assembly and testing

We manufacture and assemble our automated pump solutions in our Hyderabad facility, conducting rigorous assembly-line testing on in-house standardised products and factory acceptance testing (FAT) on customised solutions.

We conduct both static and dynamic testing of our products to all relevant ISO and international standards to ensure total operational performance and quality assurance.

After installation and commissioning, where required we conduct site acceptance testing (SAT) on the system in conjunction with the client to ensure full satisfaction and client peace of mind.

Double Stage Oil Sealed Rotary Vane

Single Stage Oil Sealed Rotary Vane

stanpumps™

our products

Stanpumps design and manufacture all types of modular process pump solutions to current good automated manufacturing procedures (cGAMP) in standardised and bespoke designs configurations.

Each range of pumps is also offered with a plethora of optional features which can improve plant and operator safety, reduce running costs and/or improve product quality. Pump ranges include;

- Dry Vacuum : vertical multi stage dry lobe and claw (300 m3/hr)
- Roots Boosters: 250 - 3000 m3/hr.
- Rotary Vane: Single and Double stage (6-300 m3/hr)
- Complex systems: Complete custom made solutions

our quality systems

Stanpumps operate a ISO9001 quality management system covering the design, manufacture and assembly of pump and pump systems.

After fabrication and machining our products are finished to ensure all the surfaces are clean, rust free and conform to cGMP.

Thorough visual and dimensional inspection checks are conducted throughout the manufacturing, assembly and testing process using series of quality assurance internal checklists before dispatch and on-site installation. stock/assembly.

our install and commission service

After the equipment has passed the factory acceptance tests (FAT), it is packaged and transported to the clients facility. Stanpumps has a wealth of experienced on-site personnel who are able to provide client value-adding services. Such services include;

- Full equipment installation and commissioning including site acceptance testing (SAT).
- Equipment alignment checks, condition monitoring and reporting as part of a healthcare contract.
- Equipment on-site assessment, removal and refurbishment.
- Operator training and full equipment documentation including standard operating procedures (SOP's) and maintenance manuals.
